Enzo Juhel

AI Software Engineer | Multi-Agent Systems & DevSecOps

Boston, Massachusetts • enzo.juhel@epita.fr • linkedin.com/in/enzo-juhel • github.com/Prog-up

SUMMARY

Software Engineer specializing in multi-agent AI architectures, low-latency on-device LLM inference, and DevSecOps. Published researcher on Intel Xe GPU acceleration with public models on Hugging Face; hackathon winner and production systems developer using Model Context Protocol (MCP), Ansible, and cloud infrastructure. Candidate for dual M.S. degrees at EPITA and Boston University (Cybersecurity).

WORK EXPERIENCE

Excense — Software Engineering Intern | *AI & Systems* Sep 2025 – Jan 2026 | Rennes, France

- Architected a desktop application Proof-of-Concept integrating **Model Context Protocol (MCP)**, connecting native desktop workflows to autonomous generative AI agents.
- Engineered an automated web service for continuous **LLM compatibility and regression testing**, standardizing multi-model benchmarking pipelines.
- Modernized core enterprise modules via **.NET 9 (C#)** migration, optimizing async request performance and service reliability.

Sentient Script — Software Engineering Intern | *Full-Stack & AI* Jan 2024 – Aug 2024 | Chennai, India

- Developed 2 full-stack production platforms using **Next.js and Flask**, embedding local LLMs (**Mistral, Ollama**) for automated image understanding and enterprise chat workflows.
- Connected Flask backend REST APIs with Next.js frontend interfaces, ensuring reliable end-to-end data flow and responsive AI interactions.
- Containerized application environments with **Docker** and declarative builds via **Nix**, eliminating configuration drift across a distributed team of 20 engineers.

HONORS & COMPETITIONS

OVHcloud Hackathon — 1st Place Winner 2026

- Designed and deployed an autonomous procedural Honeypot powered by **Agent-to-Agent (A2A)** multi-agent architectures to deceive and analyze threat actors.

National Cybersecurity CTFs — Top Competitor 2026

- Placed **5th / 40 teams** at Hack'Lantique and **12th / 100 teams** at BreizhCTF using custom AI tooling for automated exploit triage and binary analysis.

RESEARCH & TECHNICAL PROJECTS

Local LLM Inference on Intel Integrated GPUs | *OpenVINO, SYCL, Vulkan, Python* 2026

- Published empirical research benchmarking 14 LLMs (1B–9B) on Intel Iris Xe; analyzed Xe-LP 4 GiB buffer limit and achieved **12–14 tokens/sec on 7B models** via OpenVINO tiled allocation (vs. 4–6 on Vulkan/SYCL).
- Resolved Gemma vision-language fragmented graph loading in OpenVINO by stitching embedding sub-graphs into decoder (14.8 tokens/sec on E4B); published 3 optimized models on Hugging Face (Prog-up).

Automated Hardened Home Server Infrastructure | *Ansible, Podman Quadlet, Debian 13, nftables, SOPS* 2026

- Automated bare-metal Debian server deployment with modular **Ansible playbooks** and rootless systemd-integrated **Podman Quadlet** units with per-service user isolation.
- Implemented DevSec hardening via **nftables** firewall (Tailscale/LAN allowlisting, zero public exposure), Fail2Ban, AIDE, and **SOPS encrypted secrets** with Forgejo CI/CD.

Enterprise Infrastructure Simulation | *Proxmox VE, Linux, WireGuard, IaC* 2024

- Designed and provisioned automated network topology in **Proxmox VE** simulating core enterprise services, VLAN segmentation, and hardened firewall policies.

Scalable Distributed Microservices Platform | *Java, Quarkus, Redis, NoSQL* 2026

- Built a high-concurrency microblogging prototype using **Quarkus** and reactive programming patterns, integrating **Redis** caching for sub-millisecond response latency.

EDUCATION

Boston University Jan 2027 – Aug 2027

Master of Science in Computer Information Systems | Specialization in Cybersecurity (Dual Degree) Boston, MA

- Coursework: Network & Cloud Security, AI & Cybersecurity, Secure Software Development (DevSecOps), Cryptography.

EPITA: School of Engineering & Computer Science Sep 2022 – Jun 2027

Master of Science in Computer Science & Software Engineering Rennes, France

- Coursework: Distributed Systems, Compiler Design (Tiger Compiler), Cybersecurity, Operating Systems Architecture, Advanced Algorithms.

SRM Institute of Science and Technology (SRMIST) Jan 2024 – Aug 2024

International Exchange Semester in Computer Science | AI, IoT & Embedded Systems, C++ Chennai, India

Victor Hugo Preparatory College — CPGE MP2I Sep 2021 – Jul 2022

Intensive Mathematics, Physics & Computer Science Track | Developed SAT Solver in C/OCaml Besançon, France

TECHNICAL SKILLS

- **Languages & Systems:** Python, C, C++, C#, Rust, Java, TypeScript/JavaScript, Bash, SQL, OCaml, Go, Linux (Debian, NixOS, Arch), Git, CI/CD
- **AI & Agentic Systems:** Multi-Agent Architectures (A2A), Model Context Protocol (MCP), LLM Inference (Ollama, OpenVINO, vLLM), RAG
- **Cloud & DevSecOps:** Kubernetes, Terraform, Ansible, Podman Quadlet, Docker, Proxmox VE, Tailscale, nftables, SOPS, FastAPI, Next.js, Redis
- **Cybersecurity:** Ghidra, Trivy, Reverse Engineering, Binary Exploitation, Web App Security (OWASP), Network Forensics, CTFs
- **Languages:** English (Professional Working Proficiency - B2 / TOEIC / TOEFL iBT), French (Native)
